Black Death Aids In Africa

A 2008 study revealed that HIV/AIDS infection in South Africa was distinctly divided along racial lines: 13.6% of Black Africans in South Africa are HIV-positive, whereas only 0.3% of Whites living in South Africa have the disease. False traditional beliefs about HIV/AIDS, which contribute to the spread of the disease, persist in townships due to the lack of education and awareness programmes...

HIV/AIDS is a major public health concern and cause of death in many parts of Africa. Although the continent is home to about 15.2 percent of the world's population, more than two-thirds of the total infected worldwide – some 35 million people – were Africans, of whom 15 million have already died. Sub-Saharan Africa alone accounted for an estimated 69 percent of all people living with HIV...

Pneumonic, septicemic, and bubonic plague are transmitted to humans from fleas that have fed on infected rodents. Plague symptoms include swollen lymph nodes, fever, and chills. Get the facts on the history of plague (Black Death).
